# XL Shutter Maintenance and Care

Your QMi XL Rolling Shutters should be operated as often as possible to ensure optimal performance. Your XL shutters should be installed in the building interior. For these interior shutters, once per week is recommended, but a minimally accepted standard is once per month. This will loosen any foreign substance that may accumulate on the slats and guide rails. Do not force your shutter to open or close.

## GENERAL MAINTENANCE AND CARE

**Cleaning INTERIOR Shutters:** With the shutters in the completely open position, use a damp cloth or towel to wipe down the inside of the guide rails. Spray the inside of the guide rails with dry silicone spray only. Do not use oil-based lubricants. Dampen a clean cloth with the silicone spray and wipe down the outside of the box housing, the exterior of the guide rails and the entire universal and handle assembly. This procedure should be performed twice per year.

## GENERAL OPERATING INSTRUCTIONS

	<b>CRANK &amp; GEAR</b>	<p><b>To Raise:</b> Holding the crank handle at a 45° angle, bend the handle at the two elbows and turn the handle until the shutter is in the desired position. Do not attempt to roll the curtain all the way into the box housing. 2"-3" of slat must stay engaged in the guide rails.</p> <p><b>To Lower:</b> Turn the crank handle in the opposite direction until shutter is closed, and turn no further. Do not force.</p>
	<b>MOTORIZED SHUTTERS</b>	<p>When operating motorized shutters, ensure the shutter path is clear of obstacles. Visually observe the shutter path when operating the remote control or switch to ensure the curtain is not obstructed. There are no reversing sensors on the shutter and damage may occur to the shutter or the obstacle. Obstructions can also throw off the limit stops creating the need to reset them.</p>
